

How to Configure the SMTP server for out-going emails?

Objectives

- Configure SMTP server for outgoing emails

Steps

Follow these steps to configure the Outgoing Mail on LEXZUR:

1. Go to Settings -> Setup & Configuration under System Preferences section -> Outgoing Mail tab.
2. Set the values into the empty fields shown in the screenshot below according to your SMTP Server:

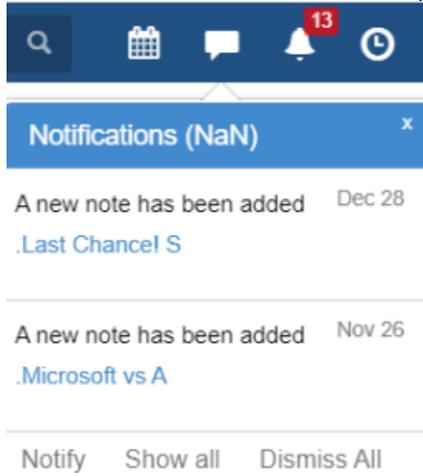

Property	Default Value	Actions
Outgoing Mail (SMTP Mail Server): From Address	noreply@madungujadhurc	Save
Outgoing Mail (SMTP Mail Server): From Name	App4Legal Notification	Save
Outgoing Mail (SMTP Mail Server): SMTP Encryption	ssl	Save
Outgoing Mail (SMTP Mail Server): Host Name	smtp.gmail.com	Save
Outgoing Mail (SMTP Mail Server): Username	noreply@madungujadhurc	Save
Outgoing Mail: Requires Authentication	Yes	Save
Outgoing Mail (SMTP Mail Server): Password		Save
Outgoing Mail (SMTP Mail Server): Port	465	Save
Outgoing Mail (SMTP Mail Server): Subject Prefix	App4Legal	Save
Outgoing Mail (SMTP Mail Server): Timeout	5	Save

3. Optional steps for specific domains like google accounts:
 - i. Change account access for less secure apps :
 - a. Sign in to your Gmail account (sign in using your administrator account used as username in the outgoing mail configuration).
 - b. Click on the account in the top right button.

The screenshot shows the Gmail Settings page for an account. The 'Language' is set to 'App4Legal Mail display language: English (US)'. Under 'Right-to-left editing support', the 'Right-to-left editing support on' option is selected. The 'Default country code' is set to 'Lebanon'. The 'Maximum page size' is set to 'Show 50 conversations per page'. The 'Undo Send' section shows 'Send cancellation period: 5 seconds'. Under 'Default reply behavior', the 'Reply' option is selected. Under 'Hover actions', the 'Enable hover actions' option is selected. Under 'Send and Archive', the 'Hide "Send & Archive" button in reply' option is selected. The 'Default text style' is set to 'Sans Serif'. The 'Images' section shows the 'Always disallow external images' option selected.

- iii. Unblock Captcha:
 - a. On your device's browser, go to <https://accounts.google.com/DisplayUnlockCaptcha>.
 - b. Enter your username and password, then enter the letters on the screen to continue (optional if the captcha is visible in the screen).
4. Test and validate the notification throughout the following steps:
 - a. On the same page, you can press the Test button to see the result of Outgoing Mail Integration, in case the result was failed then contact our support team, and no need for the next step

b. Go to the notification icon in the toolbar of the application and press Notify link as shown below:

i. Enter the description and add your email to validate the notification via email:
